(54) Title: A METHOD AND SYSTEM FOR SUBSCRIBER INTEGRITY IN A MOBILE COMMUNICATIONS SYSTEM

A

(57) Abstract: A system and method for protecting the integrity of subscribers in a process of positioning a mobile terminal (2b) via a location based service client (5), in relation to the client (5), in a communications system. A gateway mobile location centre (4) is adapted to: receive a request for an alias identity for an entity (1a) initiating a positioning request and for a subscriber (2a) associated with the mobile terminal (2b) to be positioned; assign an alias identity for the entity (1a) and the subscriber (2a); store the alias identities for the entity (1a) and the subscriber (2a) in association with the subscriber numbers; receive a positioning request from the client (5) for the subscriber (2a), wherein the request includes the alias identity for the subscriber (2a); look up the subscriber number matching the alias identity; perform a positioning request for the mobile terminal in a n associated network (3); and send a response including location information received from the network (3) and the alias identity to the client (5)
